SUMMARY

Aspiring Junior Data Engineer pursuing a Bachelor's degree at Cairo Higher Institute (2026) with hands-on experience designing end-to-end Data Warehouses, ETL pipelines, and automated data workflows using Apache Airflow, SQL Server, SSIS, PostgreSQL, Python, and Star Schema modeling. Proven ability to architect scalable data solutions through real-world projects involving Medallion Architecture, workflow automation, and data transformation for analytics-ready systems. Strong foundation in data engineering principles, data modeling, and pipeline optimization, complemented by rapid technical adaptability, persistence, and a demonstrated ability to build production-focused systems across data and software domains.

EXPERIENCE

SQL Data Warehouse Project (Medallion Architecture) ↗

Designed and implemented an end-to-end Data Warehouse using the Medallion Architecture (Bronze, Silver, Gold) to transform raw source data into analytics-ready Star Schema views.

Automated ETL Data Warehouse Pipeline ↗

Architected an end-to-end automated ETL pipeline using Apache Airflow to ingest and transform real-time user data. Implemented robust error-handling and sensor-based triggers to ensure system availability, resulting in a reliable and fully automated data ingestion process into a PostgreSQL warehouse.

I Love Text Project ↗

Developed a full-stack web application using Flask that integrates state-of-the-art Hugging Face AI models for advanced text processing. Implemented a robust data pipeline capable of handling content moderation, multilingual translation via M2M100, and text summarization using BART-CNN, ensuring scalability through automated text chunking.

Hospital Management System ↗

"Engineered a robust Hospital Management System using Java, applying core Object-Oriented Programming (OOP) principles to manage patient records, doctor schedules, and billing workflows. Optimized system performance and data retrieval speed by implementing efficient search algorithms, such as Binary Search, within a modular desktop architecture integrated with JDBC for secure and reliable database operations."

Rent Car Project ↗

"Architected an end-to-end Car Rental Platform featuring an intuitive UI/UX for seamless vehicle browsing and booking. Optimized administrative processes through automated system management and secure payment integration, significantly reducing manual paperwork and transaction time."

EDUCATION

Computer Science

Cairo Higher Institute of Engineering, Computer Science, and Management - Student Bachelor's Degree

GPA 3.31

2022 - Present

CERTIFICATES

Astronomer Certification for Apache Airflow 3 Fundamentals ↗
Astronomer

Data Engineering for Beginners: Python, SQL & Airflow ↗
Kiwilytics

Developing Creative and Innovative Thinking Skills in the Age of Artificial Intelligence
Just to Learn

SKILLS

Python	Data Pipeline
Data Wrangling	Java
SQL	OOP
MS SQL Server	Data Structure
DWH	Algorithms
Data Modeling	Agile
ETL	Problem Solving
Apache Airflow	Creative Thinking & Idea Generation

LANGUAGES

English	Arabic
